5.5.1	Area Under Tomatoes by Region and by Planting Type	62
5.5.2	Holders Growing Tomatoes and Area Per Holder	62

INTRODUCTION

1.1. Background

It is thought desirable to give a brief outline of the history of the collection, analysis and publication of agricultural statistics in Ghana in as far as it is relevant to the planning and objectives of the 1984/85 Sample Census of Agriculture.

In 1950, Ghana (then the Gold Coast and British Togoland) was among 23 African Countries that participated in the World Census of Agriculture, but this merely involved formulation of regional estimates on acreage and production of food crops.

In early 1960's, many surveys on specific aspects of the country's agricultural economy were undertaken, ^{but} the national estimates of areas and yields of crops were derived from reports submitted by Agricultural Officers in the districts.

In 1964, however, there was a complete enumeration of the large and specialized holdings. From 1965 to 1969, annual sample surveys of small holdings were conducted, and the sample size for the survey rose from 2,000 holdings in 1965 to 5,000 in 1969.

In 1970, Ghana participated fully in the World Census of Agriculture Programme and this involved collection of data from a sample of over 58,000 holders spread over 702 sample Enumeration Areas. The Census was successfully carried out; and by March 1972, Volume I of the Census Report giving inter alia, the results on land use, crops and livestock was published; with Volume II coming out the following year with the rest of the results.

1.2. Administrative Responsibility

A Government circular dated 2nd November, 1979 established a National Agricultural Census Committee which was inaugurated in March 1980. The Committee was to plan, execute and see to the implementation of the Census Programme. This Committee later broke into sub-committees to see to the various facets of the census.

The parent Committee was however folded up in 1982 and thereafter, the planning and execution of the census programme fell solely upon the Director of Agricultural Economy, Ministry of Agriculture who was helped by the National Agricultural Census Co-ordinator, Senior Officers of the Crop Statistics Section and an FAO statistician.

1.3. Objectives

It was decided by the National Agricultural Census Committee that the Census Programme should be split into two phases; the first to take place in 1984 and the second in 1985. It was also agreed to follow the main objectives set out for the 1970 Census of Agriculture Programme which were:

- (i) To conduct a Sample Census of Agriculture based on an adequate frame of sufficient size to enable district, regional and national estimates to be produced for the main items to be included in the census;
- (ii) to give enough training in the methodology required in the field to the staff to be engaged in the collection of the census data and to ensure that they were brought to a high-level of efficiency in carrying out their duties; and
- (iii) to produce from the sample census, a master sample of holders about whom certain basic information could be collected.

It was also generally agreed among members of the committee to follow broadly the guidelines laid down in the 1980 World Census of Agriculture Regional Programme for Africa as published by FAO.

1.4. Census Organization

The Sample Census of Agriculture was basically the responsibility of the Economic Research and Planning Service (ERPS) of the Ministry of Agriculture; and the section whose resources were utilised in carrying out the Census was the Statistics Section.

Apart from Headquarters staff including Senior Officers working with the Section, the Department has permanent officers in each

of the ten regions of Ghana headed by a Regional Agricultural Economist who is normally a graduate. Each Regional Agricultural Economist has at his disposal a Regional Supervisor, District Supervisor and a number of field enumerators. These were the staff that were utilised for the collection of the data; no extra staff were recruited specifically for the census.

Table 1.1 below gives the breakdown of the field force available for the census enumeration.

Table 1.1 - REGIONAL STAFF USED FOR CENSUS ENUMERATION

Region	Senior, Professional and Supervisory Staff	Field Enumerators	Total
Western	10	56	66
Central	12	63	75
Greater Accra	6	37	43
Eastern	16	85	101
Volta	11	59	70
Ashanti	15	70	85
Brong Ahafo	12	95	107
Northern	9	37	46
Upper East	13	64	77
Upper West	10	50	60
Total	114	616	730

It must however be stated that between the period when the sample size for the first-stage units (Enumeration Areas) was decided (based on the number of field staff at post then) and when the field work was actually commenced, the Department had lost about 112 field enumerators.

1.5. Publicity

A series of activities were planned to publicise the Agricultural Census Programme. These were to be organised at the national, regional, district and enumeration area levels. In March 1984, the Secretary for Agriculture held a press conference to brief the media on the Census Programme. A radio and television broadcast

By the Secretary for Agriculture on the eve of the Agricultural Census night i.e. 1st April 1986, was also planned. However, for various reasons, the TV and Radio Programmes were cancelled at the last minute. Other publicity programmes planned were also cancelled. The regions were therefore asked to organize their publicity and this was carried out between the 2nd and 30th April 1984. The publicity proved successful, but in a few cases the results were not encouraging because of land and chieftancy disputes.

CHAPTER II

PLANNING AND ORGANIZATION OF PHASE I OF THE CENSUS

2.1. Introduction

This part of the report concerns the planning and execution of the first phase of the Census Programme extending over the entire 1984 calendar year.

It was decided to collect information on the following items during the first phase:

- (a) Holders and Holdings,
- (b) Inventory of Crops on Holdings
- (c) Livestock and Poultry, and
- (d) Crop Areas.

The second phase of the Programme covering crop yields, farm population and labour and household activities on holdings was organized and conducted in 1985; and this phase will be covered in a second volume of this Report.

2.2. Preparatory Activities

Over the past years, the field, supervisory and professional staff of Economic Research and Planning Service (ERPS) have acquired much experience in handling problems that arise in the collection of agricultural statistics in Ghana. The methodology for area measurement by use of tape and compass and the techniques for interviewing holders are well known to most of the staff. For various reasons including that of minimising cost, no pilot surveys were undertaken to test the questionnaires. This was ^{also} because a set of questionnaires using similar concepts had been used the previous year to collect data for the 1983 Annual Agricultural Production Sample Survey.

2.3. Sampling Plan and Sample Selection

The advantages of a complete census are well known. A major advantage is its ability to provide estimates for smaller administrative and planning units or areas which a sample census cannot provide but which are needed for formulating and executing plans

for regional development or development of small selected areas. However, these advantages are, in most cases, far from being important to justify the enormous cost of a complete enumeration in a country such as Ghana where objective methods of direct area measurement of farms are required to obtain data on farm sizes and crop areas. The country neither has the resources and trained manpower nor the infrastructure to embark on any feasible programme of complete measurement of all farms. Hence a sample census appears the only possibility, as it can be conducted by using a smaller and therefore better qualified and trained force. The size and design of the sample census have to be such as can produce reliable national and regional and if possible also district estimates.

The country has been divided into Enumeration Areas (EAs) all of which had been previously mapped by the Population Census Office. In early 1979, the boundaries of the existing EAs were revised and a new list of 12,996 EAs prepared. This revised list of EAs formed the frame for the selection of the new sample of Enumeration Areas for the 1984/85 Agricultural Census.

The 12,996 EAs were first stratified into the following forty-three Agricultural Census Districts according to agro-ecological conditions.

	43. Bawku

In order to ensure adequate representation of the different types of Enumeration Areas, all EAs within a census district were further stratified into Urban, Semi-Urban and Rural categories. Enumeration Areas with a population of less than 1,500 were classified as Rural; Semi-Urban EAs were those with more than 1,500 but less than 5,000 population.

First Stage Sampling Units

Within each category of EAs in an agricultural district, a sample of EAs, the first stage sampling units, was selected using varying sampling fractions of 1:10, 1:15 and 1:20 in the rural, semi-urban and urban categories respectively. Systematic sampling procedure was used to select the sample of EAs and they were selected with probability proportional to their population which determined their size. For some semi-urban and urban categories where the number of EAs in each category in the frame could not permit adequate sample size to be selected, the two categories were

combined and a sampling fraction of 1:15 used to select the sample of EAs. The strength of field staff available for the census programme in each region was also considered in determining the number of EAs to be selected in the different categories. All in all, 1,008 EAs were selected as shown in Table 2.2 below.

Table 2.2 - NUMBER OF SAMPLE ENUMERATION AREAS BY REGION

Region	No. of Sample Areas			
	Total	Urban	Semi-Urban	Rural
Western	103	16	15	72
Central	109	16	30	63
Greater Accra	43	20	3	20
Eastern	141	18	33	90
Volta	114	13	21	80
Ashanti	153	9	42	102
Brong Ahafo	103	6	32	65
Northern	115	8	17	90
Upper West	50	1	9	40
Upper East	77	3	1	73
Total	1,008	110	203	695

The frequency distribution of the number of districts (strata) according to the number of sample EAs they had is given below.

TABLE 2.3 DISTRIBUTION OF NO. OF DISTRICTS BY NO. OF EAs CONTAINED

Number of Sample Areas	Number of Districts
Less than 14	1
14 - 17	3
18 - 21	14
22 - 25	12
26 - 29	6
30 - 35	6
36 - 40	1
41 or more	-
Total	43

Once the 1,008 areas had been selected from the list of Population Census Enumeration Areas, the task ahead was that of

Identifying the selected areas on the ground with the help of maps of these EAs and their boundary descriptions. It was not however, possible to have photo copies of the EA maps made because of the shortage of chemicals needed for the purpose. However, boundary descriptions of the selected EAs were made available by the Population Census Office and copies were typed out and handed over to the enumerators.

Second Stage Units

Within a selected EA, all the compounds/houses, households and agricultural holders were first listed. A sample of 10 holders was then selected by systematic sampling and with equal probability. All fields (farms) in the holdings of the 10 selected holders were then enumerated and measured and so were their livestock and poultry

Third Stage Units

Two to three EAs were allocated to each field enumerator. The allocation of EAs to each enumerator was done with consideration to their proximity to the location of the enumerator. One of these EAs, usually a rural one, was then designated as the "Base EA" in which only yield studies were carried out. On identification of the "Base EA", all fields (farms) of each selected holder in it were listed. For each crop, one field per holder was randomly selected by the enumerator for the yield studies and on each selected field, two yield plots were laid. The plot size varied from crop to crop.

2.4. Area Measurement Methodology

Previous agricultural statistics surveys in Ghana had shown that for estimation of areas under crops, it is necessary to carry out objective measurement of the areas of fields (farms) planted with crops. Very few holders in the country are able to give even rough figures as to the size of their farms. The need for such objective measurements of farms is the major reason why a sample of holders listed in each EA was selected for the estimation of areas under the various crops.

For some years, all the staff involved in agricultural statistics surveys have been using the "tape and compass" method of measuring fields and holdings. This method involves plotting the shape

of the field by taking compass bearings from one corner to the next and measuring the length of each side.

2.5. The Census Questionnaires

The Questionnaires used during phase I of the census programme are given in Appendix I and the Instructions Manual is in Appendix II. However, only Forms 1, 2 and 3 which were used during phase I of the census will be discussed in this volume of the report.

2.5.1. Form 1 - Listing of Agricultural Households and Holders

This form was used at the beginning of the census to compile a complete and up-to-date list of all agricultural holders in the selected Enumeration Areas for the selection of the second stage sampling units, i.e. agricultural holders.

2.5.2. Form 2 - Inventory of Crops, Livestock and Poultry

This form was used to compile an inventory of crops on the holdings of the sampled holders and of livestock and poultry kept thereon. The livestock and poultry recorded included those kept at the holder's residence and holdings irrespective of ownership as well as those belonging to him and non-holder members of his household but kept elsewhere.

For the crops that were listed on this form, information was also collected on the planting and harvesting periods of the crops.

2.5.3. Form 3 - Area Under Different Crops and Crop Mixtures

This Questionnaire was used to record the crops and their areas grown on each field (farm) within the holding of each selected holder.

This form was completed after the fields were objectively measured using the tape and compass method. Those farms that were found to be "far away" i.e., those which the holder could not visit and return to his normal residence the same day, were recorded separately.

2.5.4. Field Document A - Selection of Holders

This form which was not really a part of the set of questionnaires was used after the listing of holders in the selected Enumeration Areas was completed. It set out the steps to be

followed in the selection of the sample of 10 holders in each EA for subsequent census operations involving field area measurement and crop yield studies and enquiries relating to livestock, poultry, farm population and employment, etc.

2.6. Training of Field Enumerators

The training of all field staff (supervisors and enumerators) to be involved in the Census Programme was held on regional basis by the Regional Agricultural Economists with the assistance of the National Co-ordinator of the Census Programme.

It was completed before March 1984 for the field work to begin on time on 1st April 1984, the date chosen as the Agricultural Census Night. Emphasis was on explaining in detail to the field staff the various questionnaires, the techniques of interviewing the holders, field area measurements, crop yield studies and concepts and definitions involved. The tact and technique of canvassing the questionnaires with the holders was explained at some length to enable the enumerators to get the best of holders' co-operation and thus accurate information.

The performance of the staff during the training session was encouraging, and the trainees participated actively in practical fields demonstrations.

After the training, periodic on-the-job training was offered to the weaker enumerators to help them improve their performance.

2.7. Field Work

After the training sessions, publicity and distribution of census questionnaires and equipment to the regions and districts, the census enumeration was commenced.

The listing operation was started throughout the country on 2nd April 1984, the day following the Agricultural Census Night. The field enumerators were equipped with boundary descriptions of the areas assigned to them as well as copies of the questionnaires and the necessary equipment to conduct the enumeration.

Most enumerators had two to three enumeration areas to cover, but in rare cases in some districts where some of the field staff had resigned just before the commencement of the programme, some enumerators had to work in four enumeration areas.

The enumerators were asked to use the names of localities listed on the boundary description as a guide to include new localities that were found within the enumeration area but were not listed.

There was a lot of delay in the urban enumeration areas because of the difficulties encountered in identifying possible holders and locating them for interview. There were numerous "call-backs" due to the fact that most of these holders were also workers in the offices.

In a few instances in some regions, a few areas proved difficult for enumeration due to lack of co-operation from the chiefs and the people. Such cases were most prevalent in localities where there were land disputes or chieftancy troubles. No replacements were made in areas that refused to co-operate with the Census Programme and raising factors were accordingly adjusted at the time of tabulation assuming that areas that failed to co-operate were not different in type from the rest of the universe under study.

CHAPTER III

CONCEPTS AND DEFINITIONS

3.1. Introduction

This chapter is devoted to a discussion of the concepts and definitions of the terms used on the census questionnaires such as Holder, Holding, Household, Farming Household, House, Compound, etc.

3.2. Agricultural Holding and Holder

An agricultural holding is defined to include all the land that is used wholly or partially for agricultural production under one technical unit by one person alone or with others without regard to title, legal form, size or location. All units without land but producing livestock and poultry are also considered as holdings.

The person who is entrusted to exercise the operational or management control and responsibility over the holding is defined as the holder. In Ghana, one or more fields (farms) may be retained for permanent cultivation by a holder, whilst others are cultivated on a shifting cultivation basis. The total area of the holding in such cases was regarded as the sum total of :

- (i) The area under crops during the reference period of the census.
- (ii) The area prepared for cultivation but not sown or planted at the time of enumeration.

3.3. Household

The concept of a household during the census was based on arrangements made by persons individually or in a group to provide themselves with essentials of living which mainly include food. A household therefore consists of one or several related or unrelated persons with a common food supply which implies a common kitchen. Persons constituting members of a household are normally expected to pool their kind and cash incomes and obtain their essential living requirements either by drawing from such a common pool or common stock of goods acquired through their joint efforts.

3.4. Farm Household:

Any household which has among its members at least one person who can be considered as a holder is recognized as a Farm Household. Normally, the farms cultivated by members of the family or the head of the household are regarded as part of the holding of the Head. Occasionally however, a member of the family may be operating a holding in his or her own right and is therefore a holder and such persons were interviewed separately.

3.5. Head of Household

The head of a household is the person who is acknowledged as such by all other members either by virtue of his age or standing in the household as the chief income earner. Such a person is usually vested with the responsibility for the maintenance of the household and gives advice to other household members on all matters of social and economic significance.

3.6. Agricultural Year

For the purposes of time reference during the census, a calendar year from January to December was considered as an agricultural year.

3.7. Main (First) and Minor (Second) Seasons

The main or first season normally refers to the growing cycle of temporary crops that are planted in the first half of the year, occasionally extending up to July. Harvesting of these crops normally commences by September or October and may be extended up to November or even December.

The minor or second season is generally relevant to vegetables and short duration varieties of some temporary crops which have a growing cycle commencing with their planting in the second half of the agricultural year and harvesting extending from November to January.

3.8. Parcel (or Farm)

An agricultural holding raising crops consists of one or more land parcels or farms. A parcel or farm is any piece of land in the holding which is entirely surrounded by land, water, road, forest, etc. not forming part of that holding. A land parcel in Ghana is

synonymous with what is commonly understood otherwise as a "farm" corresponding to a single contiguous block of land under a single management.

3.9. Field

When a parcel or a farm is divided into two or more sections, with each section further enclosed with a land boundary or such other means of demarkation with a view to following different crops or land management pattern in different sections, then each section is referred to as a field. In traditional subsistence farming, a whole land parcel or farm is often found to be a single field grown a single crop or crop mixture.

CHAPTER IV

HOLDERS AND HOLDINGS

4.1. Introduction

The definition of holder is given in the preceding chapter. It follows essentially the definition recommended for the 1980 World Census of Agriculture by the FAO

The distribution of number of holders by crop enterprise and other information on the holdings and their size will be presented in this chapter.

4.2. Number of Holders

Table 4.2.1 shows the number of holders in Ghana by district and region.

Table 4.2.1 - NUMBER OF HOLDERS BY REGION AND DISTRICT

Total Ghana	1,171,720	100.0	98,120	100.0

A total of 1,171,720 holders grow maize in Ghana. This is about 63 per cent of the total number of holders in the country. About 16 per cent of the total are in the Central Region. The Upper East Region contains the lowest number, about half a per cent.

Ashanti and Brong Ahafo Regions contain almost the same number of holders that grow maize, and these two regions together account for 28.5 per cent of the total in the country.

About 98, 120 holders in Ghana are engaged in rice production, of which 84 per cent are found in the Upper, Northern, Brong Ahafo, Western and Volta Regions.

The cultivation of other major cereal crops, namely guinea corn and millet is confined mostly to Northern and Upper Regions as will be seen from Table 4.3.2 below.

Total Ghana	1382660	100.0	274760	100.0	795090	100.

Holders growing cassava in the country total 1,382,660. This represents about 75 per cent of the total number of holders in the country. Most of these holders are located in the Ashanti, Volta and Eastern Regions accounting for 54.1 per cent of the aggregate. The sample in the Upper East Region was found to have no holder cultivating cassava.

About 15 per cent of holders in Ghana engaged themselves in yam cultivation. Out of 274,760 such holders, 77,620 or 28 per cent were located in the Brong-Ahafo Region. Northern Region had 61,070 holders, growing yam that is about 22.2 per cent of the total of such holders in Ghana. The sample for Greater Accra and Upper East Regions did not show existence of any holder growing yam.

The total number of holders growing cocoyam in the country is estimated to be 795,090 representing about 4.3 per cent of the total number of holders in the country. Of this, 251,270 (31.6%) and 237,860 (29.9%) are found in the Brong Ahafo and Ashanti Regions respectively. The sample for Greater Accra, Northern, Upper East and Upper West Regions showed no holders growing cocoyam.

Table 4.3.4 shows the number of holders growing Plantain, Tomato and Pepper for each district and region.

Total Ghana	473520	100.0	155960	100.0	61140	100.0

There are a total of 473,520 holders growing plantain in Ghana; this is about 25.6 per cent of holders in the country cultivating crops. About 40 per cent of these holders are found in the Ashanti Region. The number of holders growing plantain in the Greater Accra, Northern and Upper Regions is very negligible.

While a lot of holders growing tomato are found in the Brong Ahafo Region, Ashanti Region has the highest number of holders that cultivate pepper.

4.4. Number and Size of Holdings

Information on the number of farms operated and details of the farms including the measurement of areas under different crops were collected from the sample of holders. The information given in this chapter refers to the holdings as they were during the major agricultural season in 1984. New farms that were opened during the minor season have not been included in the tabulation of holdings by size and distribution of number of farms.

The practice of shifting cultivation is prevalent in the country. Certain crops such as oil palm do occupy land that is usually retained by the holder for a very long time, while his other crops are grown on other parcels of land which may change fairly frequently. The holding therefore consists of the land under cultivation and the land opened for cultivation in the 1984 major season. Land under fallow and unsued land are not considered as part of the holding

Table 4.4.1 shows the size distribution of holdings in Ghana.

Table 4.4.1. - SIZE DISTRIBUTION OF HOLDINGS IN GHANA

Size of Holding (Acres)	Number of Holdings	%
0 - 1.9	1,223,100	66.1
2 - 3.9	338,700	18.3
4 - 5.9	134,800	7.3
6 - 7.9	61,000	3.3
8 - 9.9	31,000	1.7
10 - 14.9	34,100	1.8

Upper East	76.9	18.5	3.6	1.0	100.0
Total (Ghana)	84.4	12.3	2.6	0.7	100.0

Only Northern Region has less than 35 per cent of the holding below 4 acres in size whereas in other regions, 77 to 98 per cent of the holdings are in this category.

In the Central, Eastern, Volta and Upper West Regions, no holdings were more than 20 acres in size, and the percentage of holdings of 20 acres and above is below 4 per cent in the rest of

the regions. Comparatively large holdings are predominant in Northern and Brong Ahafo Regions.

The total size of a holding is made up of the number of farms. Table 4.4.13 shows the percentage distribution of the number of farms in a holding for three size classes of holdings and by region.

Table 4.4.13 - SIZE OF HOLDINGS BY NUMBER OF FARMS IN HOLDING BY REGION

Region	P E R C E N T A G E											
	Holdings 0-3.9 acres				Holdings 4.0-9.9 acres				Holdings 10+ acres			
	F A R M(S)				F A R M(S)				F A R M(S)			
	1	2	3	4+	1	2	3	4+	1	2	3	4+
Western	67	30	3	-	41	38	18	3	17	48	23	12

Greater Accra	78	17	4	1	41	47	12	-	100	-	-	-
Eastern	70	25	3	2	14	61	21	1	-	40	-	60
Volta	71	23	5	1	24	41	33	2	-	31	38	31
Ashanti	68	27	4	1	17	57	24	2	6	52	28	14
Brong Ahafo	66	30	3	1	33	41	20	6	20	40	24	16
Northern	57	40	2	1	17	72	9	2	14	58	25	3
Upper West	67	7	16	10	7	41	43	9	-	17	66	17
Upper East	24	53	6	7	5	46	26	23	-	34	40	26
Total (Ghana)	67	27	5	1	23	53	18	6	12	49	27	12

About sixty-seven per cent of the holdings that are less than 4 acres in size are made up of one farm only. In the Greater Accra Region, more than three quarters of the holdings below 4 acres have one farm only.

About half of the holdings that are between 4 and 10 acres in size are made up of 2 farms. It is only in the Upper East Region that about twenty-three per cent of the holdings that are between 4 and 10 acres in size are made up of four or more farms.

Nearly half of the holdings that are more than 10 acres in size have two farms, while twenty-seven per cent are made up of three farms.

In the Greater Accra Region, nearly all the farms that are more than 10 acres in size are made up of only one farm, while in the Eastern Region about 60 per cent of such holdings are made up of 4 or more farms. Thus there is absolute consolidation of large holdings in Greater Accra Region, but in the Eastern Region, large holdings have also larger number of farms as one would expect.

4.5. Number of Farms

The definition of "farm" or "parcel" as given in this report, as opposed to a field, i.e., a plot within a parcel, is not clearly defined in Ghana. The figures given in this section thus provide only a general indication of the number of farms or fields and the extent of fragmentation.

Table 4.5.1 shows the number of holders and the number of farms operated by these holders. The average number of farms per holder varies from 1.1 (in Axim-Takoradi in Western Region) to 2.4 (in Lawra-Tumu District in Upper West Region).

Table 4.5.1 - NUMBER OF FARMS BY DISTRICT

Region and District	No. of Holders	No. of Farms	%	Average No. of Farms per Holder

Wa	10,720	19,200	0.7	1.8
Lawra-Tumu	20,240	50,200	1.8	2.5

Table 4.5.1 (contd)

Region and District	No. of Holders	No. of Farms	%	Average No. of Farms Holder
Upper East Region	121,230	269,400	9.6	2.2
Navrongo	54,790	128,800	4.6	2.4
Bolgatanga	57,810	124,300	4.4	2.2
Bawku	8,630	16,300	0.6	1.9
Total (Ghana)	1,850,170	2,810,000	100.0	1.5

In the country as a whole, there are a total of about 2,810,000 farms operated by about 1,850,170 holders, giving an average of 1.5 farms per holder.

Table 4.5.2 gives by Region the percentage frequency distribution of the number of holders with different number of farms.

Table 4.5.2 - PERCENTAGE DISTRIBUTION OF NO. OF HOLDERS WITH DIFFERENT NUMBER OF FARMS*

Region	PERCENTAGE OF HOLDERS WITH				Total
	1 Farm	2 Farms	3 Farms	4+Farms	
Western	62	31	6	1	100
Central	72	24	3	1	100
Greater Accra	77	18	4	1	100
Eastern	68	26	4	2	100
Volta	68	24	7	1	100
Ashanti	61	30	7	2	100
Brong Ahafo	59	32	7	2	100
Northern	30	59	9	2	100
Upper West	39	16	30	15	100
Upper East	25	40	22	13	100
Total (Ghana)	60	31	7	2	100

About ninety-one per cent of the holders in Ghana operate holdings that are made up of two farms or less. In the Upper West and Eastern Regions, a relatively higher percentage of holders operate holdings that are made up of three farms. More than half /or more

the number of holders in the Northern Region have holdings that are made up of two farms.

While approximately one-seventh of the holders in Upper West and Upper East Regions have holdings made up of four or more farms, less than three per cent of holders in the rest of the country operate holdings with such number of farms.

CHAPTER V

AREA UNDER CROPS

5.1. Introduction

This chapter gives an analysis of the estimates of areas under the main crops grown in Ghana together with other related information on holders and holdings, and mean field sizes of the various crops in the districts and regions.

The estimates of crop areas given in this report refer to the areas on the ground as in mid-1984. The estimates are classified in most cases into (i) the area of the crop grown in pure stand or as a predominant component in the crop mixture and (ii) the area of the crop grown as subsidiary to one or two other crops in the mixture. The estimates for the area of the crop grown "mixed" with other crops include the entire area of all fields that contained an appreciable amount of the crop whether the crop was the predominant crop of the mixture or merely a minor constituent crop. No attempts have been made to derive "single crop equivalent" areas. Thus, for example, if a field was planted with maize, cassava and cocoyam, its entire area is recorded under each of the three constituent crops; in other words, this area has been counted three times.

5.2. The Cereals

Maize is one of the few crops that are grown throughout the country. Table 5.2.1 gives the area under maize in the main season of 1984 classified into the area of maize grown pure or predominant and that grown as a subsidiary crop in mixtures of crops.

Table 5.2.1 - AREA OF MAIZE BY DISTRICT AND BY TYPE OF PLANTING

Bawku	8,630	-	-	-
Total (Ghana)	1,850,170	1,171,720	63.3	1.5

About 63 per cent of holders in Ghana grow maize. In Dunkwa district of Central Region more than 90% and in Kibi district of the Eastern Region, about 9% of the holders grow maize.

The percentage of holders growing maize is however very low in the Upper East Region, where less than 16 per cent. of the holders cultivate the crop.

Rice is a cash crop of importance in Ghana and it is being developed rapidly in the Northern and Upper Regions. Most of its area lies in the Northern and Upper Regions as will be seen from Table 5.2.4 below. Parts of Brong Ahafo, Western and Volta Regions also produce some amount of rice.

Table 5.2.4 - AREA OF RICE BY DISTRICT AND BY TYPE OF PLANTING

Total (Ghana)	229,590	12.4	2.7

More than 60 per cent of all holders in the Northern, Upper East and Upper West Regions cultivate guinea corn. This percentage is however much higher in the Yendi West district of Northern Region where about 98 per cent of the holders cultivate guinea corn.

The average area for guinea corn per holder is the highest in the Bawku district of the Upper East Region.

The Millet crop is also predominantly grown in the Northern, Upper East and Upper West Regions, and it is usually grown in mixture with guinea corn.

As shown in Table 5.2.8 below about 40 per cent of the total area under millet is found in the Upper East Region and about 55 per cent in the Northern Region and the rest in the Upper West Region.

Table 5.2.8 - AREA OF MILLET BY DISTRICT AND BY PLANTING TYPE

Bawku	3,480	40.3	4.2
Total (Ghana)	199,590	10.8	2.9

About seven-tenth of the holders in the Northern, Upper East and Upper West Regions grow millet. The mean area per holder ranges from 0.5 acres (Wa District) to 4.2 acres (Bawku District). The mean area per holder for millet in Ghana is 2.9 acres.

5.3. The Root Crops

Cassava is the most widespread root crop grown in the country and forms an important part of the staple diet. Table 5.3.1 presents its area classified into area planted pure or predominantly with cassava and the area with cassava grown as a subsidiary crop in crop mixtures.

Table 5.3.1 - AREA UNDER CASSAVA BY DISTRICT AND BY PLANTING TYPE

<u>Upper East Region</u>	-	-	-
<u>Total (Ghana)</u>	493,710	1,515,210	2,008,920

As stated earlier, all crop area figures given in this report refer to the total area on ground as in mid-1984. The fore in the case of cassava which is a long duration crop, the figures given above refer to the total area under cassava as stood on ground in mid-1984, and not merely to the area plant or to the area harvested in 1984.

The above table reveals that 75 per cent of the area und cassava had this crop only as a subsidiary crop grown mixed v other crops.

Table 5.3.2 presents at regional level the total area of cassava grown either as pure, predominant or subsidiary crop and their percentage distribution.

Table 5.3.2 - TOTAL CASSAVA AREA BY REGION

Region	Total Area	%
Western	338,070	16.8
Central	199,720	9.9
Greater Accra	28,560	1.4
Eastern	244,230	12.2
Volta	237,180	11.8
Ashanti	364,450	18.1
Brong Ahafo	360,590	17.9
Northern	235,790	11.7
Upper West	330	0.2
Upper East	-	-
Total (Ghana)	2,008,920	100.0

About 36 per cent of the total area under cassava is concentrated in Ashanti and Brong Ahafo Regions and virtually no cassava is grown in the Upper West and East Regions.

Table 5.3.3 shows by district the number of holders growing cassava and their percentage. The mean cassava area is also shown.

Table 5.3.3 - PERCENTAGE OF HOLDERS GROWING CASSAVA AND AREA PER HOLDER

Total (Ghana)	1,358,360	73.4	1.5

Almost seventy-three per cent of the holders in Ghana grow cassava. In most districts in Central, Eastern, Ashanti and Volta Regions, their percentage is more than 80, but it is quite low in the Northern and Upper Regions.

Yam is another major root crop which is grown both as a subsistence and cash crop. Table 5.3.4 gives its area in pure and predominant stand as well as the area grown mixed with other crops with yam occupying a significant proportion.

Table 5.3.4 - AREA UNDER YAM BY DISTRICT AND BY PLANTING TYPE

About sixty per cent of the area under yam is found either in pure stand or as a predominant crop in a mixture of crops; and about two-third of yam cultivation is concentrated in Brong Ahafo and Northern Regions.

The number of holders growing yam and their percentage are presented below in Table 5.3.5. by district.

Table 5.3.5 - PERCENTAGE OF HOLDERS GROWING YAM AND AREA PER HOLDER

Total (Ghana)	288,040	15.7	1.9

About fifty-three per cent of holders growing yam in Ghana are found in the Brong Ahafo and Northern Regions. More than thirty per cent of holders in each of the two regions grow yam. The Northern Region has the highest mean area per holder in the country.

Cocoyam is the third major root crop popularly grown in Ghana. Its area is presented by district in Table 5.3.6 in which, like yam in the previous tables, figures for the area of cocoyam mixed with other crops include the whole area of all fields contained a significant amount of cocoyam.

Table 5.3.6 - AREA UNDER COCOYAM BY DISTRICT AND PLANTING TYPE

Cocoyam is little grown in the Greater Accra, Upper East and Upper West Regions.

In the country as a whole, about ninety-three per cent of area under cocoyam has this crop grown as subsidiary to other crops grown on the same field. Thirty-three per cent of its total area in the country is located in the Ashanti Region.

Table 5.3.7 shows by district the number and percentage of holders who grow cocoyam.

Table 5.3.7 - PERCENTAGE OF HOLDERS GROWING COCOYAM AND AREA PER HOLDER

Total (Ghana)	650,830	35.2	1.5

About 36 per cent of the total number of holders growing cocoyam in the country are located in Ashanti Region, about 18 per cent in the Eastern Region and about 16 per cent in the Brong Ahafo Region. In Ashanti Region, more than 75 per cent of the holders cultivate cocoyam.

Sweet potatoes are grown in Ghana on a small scale, mainly in the Volta, Brong Ahafo and Northern Regions. The total area under the crop is estimated at about 14,800 acres, with this crop grown as a subsidiary to other crops in the crops mixtures.

5.4. The Pulses and Nuts

Groundnut is an important cash crop in the northern part of the country. Table 5.4.1 shows the area of groundnuts classified into the area grown pure or predominantly with groundnuts and the area with this crop grown as a subsidiary crop in the crops mixture.

Table 5.4.1 - AREA UNDER GROUNDNUTS BY DISTRICT AND BY PLANTING

Rest of Ghana	3,810	-	0.9
Total (Ghana)	271,460	14.7	1.4

About three-fourth of the holders growing groundnuts live in the Northern and Upper Regions. The mean area per holder is large in Gambaga, Tamale and the Bawku districts.

The cultivation of Beans is mostly confined to Northern, Upper East and Upper West Regions/shown in Table 5.4.3 below. The figures for the area containing beans mixed with other crops include the entire area of fields that grow this crop to a significant extent.

Table 5.4.3 - AREA UNDER BEANS BY DISTRICT AND BY PLANTING TYPE

Bolgatanga	33,880	58.6	0.9
Bawku	850	9.8	1.9
Rest of Ghana	1,830	-	-
<u>Total (Ghana)</u>	64,350	3.5	1.6

Upper East Region accounts for nearly 97 per cent of the holders growing bambara beans.

5.5 Vegetables

Vegetable and Fruits, though not grown extensively, are of importance in various parts of the country. For vegetables, the same piece of land is often cultivated a couple of times during the year, and the area is counted each time of its cultivation.

Tomatoes are grown almost entirely as a subsidiary crop in a mixture of crops as shown by Table 5.5.1 below.

Table 5.5.1 - AREA UNDER TOMATOES BY REGION AND BY PLANTING TYPE

Region	AREA UNDER TOMATOES (ACRES)		
	Pure or Predominant	Subsidiary	Total
Western	1,230	42,730	43,960

TOTAL	61,140	3.3	1.0	84,200	4.6	0.8	27,130	1.5	0.7

About 22 per cent of the tomato farmers in the country are found in the Brong Ahafo Region; and in Greater Accra Region, every fifth farmer cultivates tomatoes.

5.5. Pepper, Okro and Garden Eggs

Table 5.5.3 shows the area under pepper, okro and garden eggs with the usual break-down into pure or predominant plantings and mixed plantings.

For about two-thirds of its area, pepper is planted as a subsidiary crop in a mixture of crops. About 22 per cent of the total area under pepper in the country is found in Ashanti Region. The crop is grown on a very small scale in the Northern and Upper West Regions.

A total of about 65,290 acres is under okro cultivation throughout the country, of which 94 per cent contains okro as a subsidiary crop in crops mixtures. The Northern Region accounts for more than one-fourth of the area under okro in the country.

The area under garden eggs in the country totals 19,150 acres of which over one-fourth grows the crop as a subsidiary crop in crops mixtures. About half of the total area under garden eggs cultivation is found in the Brong Ahafo Region.

Table 5.5.4 shows the number of holders growing pepper, okro and garden eggs and the percentage of such holders in the different regions along with the mean area per holder.

There ^{are} a total of 61,140 holders cultivating pepper throughout the country. Of this number, 22 per cent are found in Ashanti Region and 18 per cent in Greater Accra Region. An insignificant number of holders are found growing pepper in the Northern and West Regions.

Of the total of 84,200 holders cultivating okro in the country 26 per cent are in Volta Region and 15 per cent in the Brong Ahafo Region. In the Greater Accra Region, about 14 per cent of the total number of holders cultivate okro in the Eastern Region.

A comparatively small number of holders cultivate garden eg throughout the country. Of the total number of 27,130 holders, about 24 per cent are in the Central Region, while another 23 per cent are in the Western Region.

5.6. Tree Crops

This section gives information regarding the major tree crop grown in Ghana and the area planted to these crops. No tree count was carried out during the census and as such no estimate of the tree population is given.

Coconut is of major importance in the Western Region and of minor importance elsewhere as shown in Table 5.6.1 which gives its area under the two major classifications.

Table 5.6.1 - AREA UNDER COCONUT BY DISTRICT AND BY PLANTING TYPE

Region and District	AREA UNDER COCONUT (ACRES)		
	Pure or Predominant	Subsidiary	Total
Western Region	77,510	1,830	79,340
Axim-Takoradi	77,510	400	77,910
Tarkwa		130	130
Asankragwa		1,300	1,300
Other Regions	2,580	80	2,660
Total (Ghana)	80,090	1,910	82,000

Ninety-five per cent of the area containing coconut trees is within the Axim-Takoradi district where it is considered a major cash crop; and about 97 per cent of its area grows it as a pure crop or a predominant crop in crops mixtures.

As shown in Table 5.6.2, of the total of 18,870 holders having coconut on their holdings, about 83 per cent are located in the Axim Takoradi district of the Western Region, and the number of coconut holders constitute about 32 per cent of the total number of holders in the district.

Table 5.6.2 - HOLDERS WITH COCONUT AND AREA PER HOLDER

Region and District	Holders with Coconut	% of Total Holders	Mean area per Hold
Western Region	16,430	8.0	4.8
Achim-Takoradi	1,710	32.2	5.0
Tarkwa	290	0.7	0.4
Asankragwa	430	1.0	3.0
Other Regions	2,440	-	1.1
Total (Ghana)	18,870	1.0	4.3

Table 5.6.3 which gives at the regional level the area under oil palm classified into the usual categories shows a total of 305,020 acres under oil palm cultivation in the country. About half of this area is found in Ashanti Region and a further 17 per cent in the Western Region.

Table 5.6.3. - AREA UNDER OIL PALM BY REGION AND BY PLANTING TYPE

Region and District	AREA UNDER OIL PALM (ACRES)		
	Pure or Predominant	Subsidiary	Total
Western	33,680	19,380	53,060
Central	8,860	9,320	18,180
Eastern	30,190	10,540	40,730
Volta	12,950	15,690	28,640
Ashanti	129,900	17,070	146,970
Brong Ahafo	14,630	2,810	17,440
Total (Ghana)	230,210	74,810	305,020

About 73 per cent of the area under oil palm is in pure stands or contains it as a predominant crop in the mixture of crops.

Table 5.6.4. shows the number of holders growing oil palm and their percentage in the different districts.

.../..

Table 5.6.4 - HOLDERS GROWING OIL PALM AND AREA PER HOLDER

Region	Holders with Oil Palm	% of Total Holders	Mean Area per Holder
Western	23,050	11.2	2.3
Central	11,250	5.2	1.6
Eastern	11,290	4.6	3.6
Volta	8,550	3.1	3.3
Ashanti	14,760	4.7	9.8
Brong Ahafo	5,320	2.1	3.3
Total (Ghana)	74,220	4.0	4.1

Thirty-one per cent of the holders growing oil palm are in Western Region and another 20 per cent in Ashanti Region.

The highest mean area per holder for oil palm is in the Ashanti Region where the mean area per holder is 9.8 acres.

Of the 822,970 acres under plantain as shown in Table 5.6 below, 625,510 acres or about 76 per cent have this crop as a subsidiary to other crops in the mixture. About one-third of the area is in Ashanti Region while about 16 per cent is in Eastern Region.

Table 5.6.5 - AREA UNDER PLANTAIN BY DISTRICT AND BY PLANTING

Region and District	AREA UNDER PLANTAIN (ACRES)		
	Pure or Predominant	Subsidiary	Total
<u>Western Region</u>	45,040	132,530	177,570

Sunyani	25,840	51.6	2.6
Dormaa	12,840	28.2	2.8
Wenchi West	2,360	7.7	2.8
Wenchi East	9,340	21.4	2.8
Rest of Ghana	1,030	-	2.1
<u>Total (Ghana)</u>	453,520	24.5	1.8

One-fourth of the total number of holders in Ghana grow plantain on their holdings. In parts of Ashanti (Bekwai and Juaso-Mampong East districts), about eighty per cent of the holders cultivate plantain. The mean area per holder for plantain varies from 0.6 acres to 3.5 acres.

Sugar cane is a cash crop of major importance in two areas that produce sugarcane to feed the two sugar factories at Asutuare and Komenda. These two factories are serviced by plantations near them and by sugarcane produced by out-growers who live within a few miles of the factories. Sugarcane is also grown on a small-scale by holders either for home consumption or for sale in the local market as cane.

Table 5.6.7 shows the area of sugarcane grown and the number of holders growing the crop. Also given is the mean area per holder.

Table 5.6.7 - HOLDERS GROWING SUGARCANE AND AREA OF SUGARCANE

Region	Holders Growing Sugarcane	Area of Sugarcane	Mean Area per Holder (Acres)
Western	4,910	7,560	1.5
Central	5,630	5,430	1.0
Greater Accra	670	260	0.4
Eastern	2,720	2,550	0.9
Volta	5,900	6,000	1.0
Ashanti	1,630	1,360	0.8
Brong Ahafo	3,040	9,230	3.0
Total (Ghana)	24,500	32,390	1.3

There is a total of 32,390 acres under sugarcane throughout the country of which 9,230 acres or 28 per cent is found in Brong Ahafo Region.

A total of 24,500 holders produce sugarcane out of which about 24 per cent are located in Volta Region.

The mean area per holder ranges from 0.4 acres in Greater Accra Region to 3.0 acres in Brong Ahafo Region with the national mean area per holder at 1.3 acres.

CHAPTER VI

COMPARISON OF ESTIMATES FOR 1970 AND 1984

6.1. Introduction

In this chapter an attempt has been made to compare for the two census years 1970 and 1984 the estimates for a few major items such as (a) number of holders, (b) number of holdings by size and (c) areas of selected important crops. Possible explanations for variations have also been given.

6.2. Holders and Holdings

Table 6.1 shows comparative figures of the number of holders estimated for the years 1970 and 1984.

Table 6.1. - NO. OF HOLDERS IN 1970 AND 1984

Region	No. of Holders in 1970	No. of Holders in 1984	Percentage Increase
Western	68,100	206,190	202.8
Central	81,100	217,510	168.2
Greater Accra		48,700	
Eastern	148,200	244,140	97.6
Volta	108,600	274,480	152.7
Ashanti	147,700	314,250	112.8
Brong Ahafo	71,600	252,669	252.9
Northern	61,200	139,900	128.6
Upper West		30,960	-
Upper East	118,700	121,230	28.2
Total (Ghana)	805,200	1,850,029	129.8

At the time of the 1970 Census of Agriculture, Greater Accra Region was part of Eastern Region and the Upper West and East Regions were together.

The number of holders for the whole country shot up by 129.8% in 1984. A part of this increase is attributable to the rising population and increasing pressure on land. To a great extent it is also due to the fact that there was drought and bush-fire incidence throughout the country in 1983. This caused scarcity of food

6.3. Crops

Comparative figures for the areas under four major crops for the years 1970 and 1984 are given by Region in tables 6.3 to 6.6. Also given are the percentage change between the two years.

Table 6.3. - AREA UNDER MAIZE IN 1970 AND 1984

Region	Area under Maize in 1970 (Acres)	Area Under Maize in 1984 (Acres)	% Chang
Western	73,000	192,710	164.
Central	90,000	199,780	122.
Greater Accra)		104,710	
Eastern)	161,000	202,650	90.

Upper West)			
Upper East)	51,000	16,320	-68.
Total (Ghana)	426,000	550,210	29.

Maize: Most regions showed increases in the area this crop in 1984 as compared to 1970. The reasons are similar to those given above. It should be noted that when most people decide to go into farming, they mostly concentrate on the production of maize and cassava. Therefore any increase in the number of holders will cause a corresponding increase in the area under these crops.
